Project Announcement – Sensitive US Government Location

Montgomery, AL - Project Announcement
Released 5/22/2007 by Norshield

Norshield Vehicle Barrier Systems Division is proud to announce that we have received an order to provide equipment for a United States Embassy project at an undisclosed location. This marks the fifth United States Embassy project Norshield will provide equipment for in the 2006-2007 Department of State/OBO construction cycle. The order further solidifies Norshield's overall posture with the Department of State as a leading manufacturer of world class security equipment.

This year Norshield successfully supplied equipment including the NOR200 Electric Wedge Barrier on a very important and sensitive project. Recently, Norshield also received orders for vehicle barrier systems on four other high profile government projects. Norshield has expanded and improved in response to the increased demand by the Department of State and Overseas Building Operations (OBO) for security equipment which has resulted in large orders for vehicle barrier systems as well as FE/BR products.

Norshield has improved upon being the largest manufacturer of forced entry, bullet resistant, and blast resistant products by adding a full line of vehicle barrier systems. In response to the increasing demand, Norshield has increased the products it offers to include the Norshield Sally Port which consists of two NOR41 Non Rated Anti-Climb gates, one NOR82 Hydraulic Wedge Barrier, and Lumenyte's In Ground Vehicle Illumination System. No other company can boast the total Sally Port solution for a high security location and the contractors responsible for the facilities construction. This strategy of single sourcing certain security aspects of large government projects which require specific expertise continues to prove successful and is helping to establish Norshield as not only the leading manufacturer of FE/BR products but also as the best source for vehicle barrier systems.

Norshield is proud to work in such a critical field where excellence is a necessity. Norshield plans on doing many more projects in conjunction with the United States Government, DOS, OBO, and the general contractors for current and future high profile security projects.

Norshield Security Products is a registered trade name under the company Norment Security Group. Norment Security Group is a subsidiary of Compudyne Corporation. Please see <http://www.go-vbs.com/contact/corporate-contacts/public-safety-justice/> for more information.
