San Diego Area Airport Project Awarded

Project Announcement
Project Awarded 7/2007
Released 12/18/2007 by Norshield

Norshield's Vehicle Barrier Systems Division is proud to announce that we have received an award to provide vehicle barrier systems to protect a San Diego area airport in conjunction with one of our San Diego area contracting partners. The hydraulic bollards will protect three different locations around the area. As awarded in July 2007, Norshield will provide the primary vehicle security equipment and secondary devices such as traffic lights to protect onsite personnel, property, and national interests. The total order of 20 bollards plus secondary equipment constitutes one of the larger bollard product orders in recent Norshield VBS history. This is the first major airport project Norshield has been awarded this year giving Norshield headway into new markets. The award marks a continued effort to expand into other security markets and provide our quality products at diverse locations all around the world.

Norment Security Group has done work throughout the world working on DOS projects for over 30 years. It gives Norshield VBS great pride to protect national interests by helping to secure a major airport hub within the United States. The safety of our nation's infrastructure is crucial to our national security and thus a priority for Norshield and its Attack Protection division. Norshield is proud to work in such a critical field where excellence is a necessity. Norshield plans on doing many more projects in conjunction with national security interests and general contractors for current and future high profile security projects.
