## **Federal Courthouse Project Awarded**

Project Announcement  
Project Awarded 7/2007  
Released 12/18/2007 by Norshield

Norshield's Vehicle Barrier Systems Division is proud to announce that we have received an award to provide vehicle barrier systems to protect a Seattle area Federal Courthouse in conjunction with one of our security integration partners. The custom hydraulic bollards will protect several high security access points onsite. As awarded in July 2007, Norshield will provide the primary vehicle security equipment and secondary devices such as traffic lights to protect onsite personnel, property, and national interests. This is a major federal courthouse project for Norshield, and the award this year gives Norshield headway into yet another new market. This award for custom bollards shows Norshield's diversity and strength in design engineering. This also shows the strength of the relationships Norshield has developed with GSA and our integration partners. This marks a continued effort to expand into other security markets and provide our quality products at diverse locations all around the world.

The safety of our nation's infrastructure is crucial to the security of our judicial system and thus a priority for Norshield VBS and Norment Security Group. Norshield is proud to work a field where excellence is a necessity. Norshield plans on doing many more projects in conjunction with GSA, our integration partners, and our network of general contracting partners for current and future high profile security projects.
